I'm Arthur, a developer that loves work with computers and self-made apps. My projects can be seen at GitHub, and sometimes at CodeProject. Besides software, I also love reading about alternative medicine in order to figure out what's working and what's not. You are welcome to leave comments, suggestions, ideas and corrections. Thank you for downloading and trying the software.In one of the post-season's great upsets, the St. Louis Cardinals have bested the San Francisco Giants 4 games to 2 to advance to the National League Championship Series. b7e8fdf5c8

CPUInfo Crack + Free

CPUInfo is an small application available for Windows 95/98/ME/2000/XP. This application was developed to show information about your computer's CPUs in a intuitive and organized way. The report provided contains different information about your CPUs such as core information, processor type and CPUID.. CPUInfo is a very simple Windows application that can show you information concerning the processor, using a very clean and well-organized interface as a means of communication. The program has been specifically designed with a single goal in mind, to show processor details, so aside from reading some valuable information about this particular hardware component, you can't do anything else. The interface adopted a tabbed layout, with two important sections, processor information and Windows, each with pretty self-intuitive names. The "Processor Information" tabs shows details on each core of the CPU, such as data concerning the current core speed, revision, vendor ID, CPU name, instructions, cache, feature flags and detailed CPUID. The Windows tab could come in handy to many users out there because it shows the current operating system, service pack and build, total, used and free physical memory and virtual memory. It addition, it displays other processor details accessible from Windows, including the maximum number of cores, active cores, processor type and level, revision and architecture. All these details can be exported to a TXT file, with CPUInfo allowing you to select the categories you wish to be included in the report. It's more or less obvious that CPUInfo doesn't slow down your computer in any way, working flawlessly regardless of the Windows version running on your system. Overall, CPUInfo is a nice and quick way to get information on your CPU, providing a decent amount of details on this particular piece of hardware. Other similar apps out there however offer much more than that, so CPUInfo still needs some improvements in this regard. CPUInfo Description: CPUInfo is an small application available for Windows 95/98/ME/2000/XP.
