WildSoft NetScaler is a web accelerator that aims to increase the performance of an on-premises web server. It does so by parallelizing web requests and by pre-empting server resources. It provides a load balancing/caching mechanism, which speeds up web requests through cache and distributes the served content to an unlimited number of machines. NetScaler provides a comprehensive scalability and management interface for both new and existing requests. It is an on-premises solution without a proprietary runtime installation. NetScaler also provides a comprehensive web accelerator, which ensures that the served content is pre-empted quickly and efficiently with the help of a Web Content Acceleration (WCA) module. This results in a significant reduction of web server load and a significant increase of the web server scalability. This software solution is named “NetScaler” because the name reflects the scalability and efficiency which can be achieved by the product. What's new in this version: New module for the zOS platform WildSoft NetScaler can now be installed on the zOS platform. You can find it on my website or order it at: WildSoft NetScaler has been released and the first release candidate is available. I have previously announced that this version will be available only for the zOS platform. However, a few days ago I decided to start a new “community edition” to provide this software to users that don’t own WildSoft NetScaler Pro. You can find it on my website at Please note that the price is reduced to \$259.00 USD for those who want only the WCA module, while it is now \$369.00 USD for the entire WildSoft NetScaler Pro. This community edition of WildSoft NetScaler won’t provide

all the features available with the Pro edition, such as the load balancer or the WCA module. However, it will:

- Support the integration of WildSoft NetScaler with the NetScaler Management Console (NMC)
- Support the integration of WildSoft NetScaler with other WildSoft software products
- Work with WildSoft NetScaler Pro (z/OS)
